#### MISSISSIPPI STATE DEPARTMENT OF HEALTH BUREAU OF PUBLIC WATER SUPPLY CCR CERTIFICATION CALENDAR YEAR 2014 2015 JUL -1 AM 8: 25

Culkin Water District Public Water Supply Name

075000a	
List PWS ID #s for all Community	Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply

eman a copy of the CCR and Certification to MISDH. Please chec	k all boxes that apply.
Customers were informed of availability of CCR by: (Atta	ach copy of publication, water bill or other)
☐ Advertisement in local paper (attach co☐ On water bills (attach copy of bill)☐ Email message (MUST Email the mes☐ Other	sage to the address below)
Date(s) customers were informed:/,	
CCR was distributed by U.S. Postal Service or other methods used U.S. Postal Service	direct delivery. Must specify other direct delivery
Date Mailed/Distributed: 06 /30/15	
CCR was distributed by Email (MUST Email MSDH a co  As a URL (Provide URL  As an attachment	
☐ As text within the body of the email me	· ·
CCR was published in local newspaper. (Attach copy of pro-	ublished CCR or proof of publication)
Name of Newspaper:	
Date Published://	
CCR was posted in public places. (Attach list of locations)	Date Posted:/_/
CCR was posted on a publicly accessible internet site at the	
CERTIFICATION I hereby certify that the 2014 Consumer Confidence Report (opublic water system in the form and manner identified above the SDWA. I further certify that the information included in the water quality monitoring data provided to the public Department of Health, Bureau of Public Water Supply.  Name Title (President, Mayor, Owner, etc.)	inis L.I. K. 15 Irile and correct and in congretant
Deliver or send via U.S. Postal Service:	May be faxed to:

Delive Bureau of Public Water Supply P.O. Box 1700 Jackson, MS 39215

(601)576-7800

May be emailed to: water.reports@msdh.ms.gov

2015 MAY 26 AM 11: 16

## 2014 Annual Drinking Water Quality Report Culkin Water District PWS ID#: 0750002 May 2015

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Cockfield Formation Aquifer. We supplement our needs from the City of Vicksburg.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Culkin Water District have received lower susceptibility rankings to contamination. The wells for the City of Vicksburg have received lower to higher susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact John Gunn, General Manager at 601-636-9124. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the second Monday of each month at 5:30 PM at the District office located at 2681 Sherman Avenue, Vicksburg.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during the period of January 1st to December 31st, 2014. In cases where monitoring wasn't required in 2014, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) — The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure -ment	MCLG		MCL	Likely Source of Contamination
Inorganic	e Contai	nınants							
10. Barium	N	2013*	.002	No Range	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natura deposits	

13. Chromium	N	2013*	2.3	No Range	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits		
14. Copper	N	2011/13*	.1	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives		
16. Fluoride**	N	2013*	.684	No Range	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories		
17. Lead	N	2011/13*	1	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits		
19. Nitrate (as Nitrogen)	N	2014	.2	No Range	ppm	10	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits		
Disinfection	<del></del>			MANY TO THE TOTAL THE TAXABLE PROPERTY.		<b>T</b>				
81. HAA5	N	2014	36	22- 36	ppb	0	(	By-Product of drinking water disinfection.		
82. TTHM [Total trihalomethanes]	N	2014	81.37	29.85 – 81.37	ppb	0		By-product of drinking water chlorination.		
Chlorine	N	2014	1.5	1-1.8	Mg/l	0	MDRL =	4 Water additive used to control microbes		

<sup>\*</sup> Most recent sample. No sample required for 2014.

<sup>\*\*</sup> Fluoride level is routinely adjusted to the MS State Dept of Health's recommended level of 0.7 - 1.3 mg/l.

Contaminant	Violation Y/N	Date Collected	Level Detec ted	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure -ment	MCLG		MCL		Likely Source of Contamination	
Inorganic	Contam	inants									
10. Barium	N	2013*	.022	No Range	ppm	2		from r depos	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits		
13. Chromium	N	2013*	2.4	No Range	ppb	100	1		Discharge from steel and pulp mills; erosion of natural deposits		
14. Copper	N	2011/13*	.1	0	ppm	1.3	AL=	syster	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives		
16. Fluoride**	N	2013*	.608	No Range	ppm	4		additiv discha	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories		
17. Lead	N	2011/13*	9	0	ppb	0	AL=		Corrosion of household plumbing systems, erosion of natural deposits		
Disinfection	on By-Pr	oducts									
81. HAA5	N	2013*	20	13 - 20	ppb		0	60	By-Product o disinfection.	f drinking water	
82. TTHM [Total trihalomethanes]	N	2013*	28.7	21.6 – 28.7	ppb		0	80	By-product o chlorination.	f drinking water	
Chlorine	N	2014	2	No Range	ppm		0	0 MDRL = 4 Water additive used to con microbes		re used to control	

st Most recent sample. No sample required for 2014.

We routinely monitor for the presence of drinking water contaminants. In the 4<sup>th</sup> quarter of 2014 test results we received show that our system exceeded the standard or MCL for Disinfection Byproducts. The standard for Trihalomethanes (TTHM) is 0.80mg/1.

<sup>\*\*</sup> Fluoride level is routinely adjusted to the MS State Dept of Health's recommended level of 0.7 - 1.3 mg/l. Disinfection By-Products:

<sup>(82)</sup> Total Trihalomethanes (TTHMs). Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.

. . .

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", our water system is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year in which average fluoride sample results were within the optimal range of 0.7-1.3 ppm was 12. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7-1.3 ppm was 100%.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", City of Vicksburg required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year in which average fluoride sample results were within the optimal range of 0.7-1.3 ppm was 10. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7-1.3 ppm was 83%.

#### Significant Deficiencies - City of Vicksburg

During a sanitary survey conducted on 3/12/2013, the Mississippi State Department of Health cited the following significant deficiency(s).

Well near source of fecal contamination (ex. Septic systems, sewer line)

Corrective actions: This system has entered into a Bilateral Compliance Agreement with MSDH to correct this deficiency by 12/31/2017.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

The Culkin Water District works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

#### **CULKIN WATER DISTRICT**

# Automated Water Metering Infrastructure Coming Soon to the District

### June 2015

Culkin Water District is constantly searching for ways to improve the quality of water and service for our valued customers. Our most recent improvement project is to install a new and more efficient water metering system.

The overall purpose of the project is to automate the meter data collection process, decrease operating costs and water meter billing errors. It will also improve water sales accounting efficiency, provide the capability of determining if water leaks exist in customers plumbing and improve overall service to its customers.

There will be construction crews working throughout the District by mid to late summer of this year. The crews will be installing new water meters and the related water meter items for all of the District's customers. Vehicles for the installation crews will be labeled as Culkin Water District Contractors. The work is expected to take approximately twelve (12) months to complete.

We want to thank you for your patience and cooperation with this project in advance of the start of construction. If you have any questions regarding the project, please call the District at 601-636-9124 between the hours of 8:00 am to 5:00 pm Monday thru Friday.
